

### Direct access to your ERP system

Sales people on the road and other mobile employees need access to your company's ERP system. IceBreak makes it possible.

Provide direct access from all mobile units, so your employees can work in the ERP system without access to a PC.

### Register your orders via a mobile phone or PDA

Allow your sales people to enter orders as soon as they receive them. They only need their mobile phone or PDA and they can access the order registration system and type in orders for further processing.

### Extended flexibility with handheld terminals

Allow your warehouse staff to register stock or order new goods from a handheld PDA with a built in bar-code.

Technical staff can log information when they are on the road.

### Service people can order spare parts remotely

Allow your service personnel to order spare parts from a customer's site using their mobile phone or PDA.

### Allow Customers to access their accounts from a mobile device

Banks and other financial institutions can allow customers to access their accounts from a mobile phone or PDA.

## You can achieve handheld integration today...

### IceBreak

With IceBreak you can develop, build and deploy IBM i mobile web applications faster - using your existing RPG/COBOL skills.

IceBreak is native application server for IBM i, designed to take the pain out of programming. Just use your preferred tool to develop mobile web applications - without the need to learn Java or working in difficult-to-manage combined program code and HTML environments.

### IceCap

With IceCap you can bring your existing 5250 applications to the mobile device without changing the underlying application.

This is achieved by building a custom mobile web interface using the IceCap built-in functions to communicate with your existing 5250 application and adding HTML to give your desired appearance.

Extend the lifetime of your 5250 programs - and save money!

### Mobile frameworks

Add a mobile framework to give a native look and feel to your application on devices running operating systems such as Apple iOS and Google Android.

### Top Security

The fact that your application is displayed on a mobile device, does not imply security problems - you are still fully protected by the IBM i security and authorisation system. Your applications can be further secured by SSL, if you acquire IceBreak Server or IceBreak Enterprise.

### Great Performance

Both IceBreak and IceCap add your current fast response times to you new web applications. IceBreak and IceCap are designed specifically for the IBM i which ensures the optimal use of system functions and resources. IceBreak and IceCap are not dependant of JAVA, WebSphere or Apache that would burden the machine performance.

*Please note: Not all devices will function the same, please refer to the manufacturer for individual device capabilities*
