

## InterExcel400

### Spool file conversion to Excel

InterExcel400 is a flexible and independent application that easily converts your AS/400 reports into Excel format for further processing. The value and usability of your AS/400 data will be remarkably Increased.

Creation of professional reports is enabled by the InterExcel400 functionality and the conversion of AS/400 to excel will increase the readability e.g. by including charts.

The InterExcel400 application can be integrated into your existing programs for batch conversion of documents, or could be used by users interactively from a simple user menu.

InterExcel400 will enable you to share vital information with other non-AS/400 users e.g. via e-mail. The automatic formatting of documents via user-defined templates will ensure cost savings in time, and improved corporate communication and branding via professional looking reports.

- Easy to use
- Share Excel reports with non-AS/400 users
- Be independent of static AS/400 reports
- Flexibility in generation of user-defined Excel reports
- Improve corporate communication and branding via professional looking documents
- Conversion to Excel, .txt and .rft format

## **Formatting templates for individual spool files**

InterExcel400 enables creation of templates, used for conversion of specific spool files, into formatted Excel files. These templates include settings of how and where data is placed in the Excel spreadsheet, including cell font and border definition. The settings also enable deletion of blank lines and multiple headers on every page for easy handling in MS Excel.

## **User friendly handling via a command, similar to WRKOUTQ**

InterExcel400 enables easy selection of the spool files to be converted via a command, similar to WRKOUTQ. From this easy menu structure the user can select which target format to be used for the conversion.

## **Automatic conversion via Program Calls**

InterExcel400 features the possibility of calling the InterExcel400 conversion program from own menu structures or programs for batch conversion. InterExcel400 enables dynamic naming of the saved InterExcel400 files, giving freedom in batch conversion of reports.

## **Using Excel “import text Wizard”**

InterExcel400 features opening Excel with a text file, which will make it possible to use the MS Excel “Import Text Wizard”. This gives the user complete independence which spool file to process.

## **Conversion to .txt and .rtf format**

InterExcel400 enables conversion to .txt format and therefore also calling off the associated PC program like Notepad, Works or Word. When converting to .rtf format, MS Word will be called and the respective page breaks are respected, as opposed to using .txt.

## **Integration with InterForm400**

InterExcel400 enables InterForm400 users to expand the number of output formats for the distribution of documents. The InterForm400's e-mail distribution feature will facilitate easy distribution of Excel reports via e-mail.
